Examples

The diagram illustrates the structure of three data frames: **VideoDataFrame**, **IMUDataFrame**, and **RFDataFrame**. Each frame has a **source** field and a **timestamp** field.

- VideoDataFrame**: The **source** is a **CameraObject**. It contains a **DataObject** with **uid**: "camera", **position**: { x: 2, y: 5, z: 3 }, and **projection**: The **DataObject** also has **width**: 1280 and **height**: 1024. The **DataObject** is associated with an **Image**.
- IMUDataFrame**: The **source** is a **DataObject**. It contains a **DataObject** with **uid**: "imusensor", **position**: { x: 0, y: 0 }, and **linearVelocity**: { x: 1, y: 0 }. The **DataObject** is associated with **Acceleration** and **Sensor Frequency**.
- RFDataFrame**: The **source** is a **RFRceiverObject**. It contains a **DataObject** with **uid**: "wificanner", **relativePositions**: [{ obj: "AP1", distance: 5 }, { obj: "AP2", distance: 8 }], and **position**: { x: 0, y: 0 }. The **DataObject** is associated with **AP1 DataObject** and **AP2 DataObject**.

```
import { DataObject, DataFrame } from '@openhps/core';

const myObject = new DataObject("bsigner", "Beat Signer");
const frame = new DataFrame();
frame.addObject(myObject);
```

(method) DataFrame.addObject(object: DataObject): void

```
import {
  DataFrame,
  SerializableObject,
  SerializableMember
} from '@openhps/core';

@SerializableObject()
export class QRDataFrame extends DataFrame {
  public rawImage: any = undefined;
}
```

What is OpenHPS?

An Open Source Hybrid Positioning System

- ▶ Any technology
- ▶ Any algorithm
- ▶ Various use cases
- ▶ Flexible processing and output
 - Accuracy over battery consumption, reliability, ...
- ▶ Aimed towards
 - Developers
 - Researchers

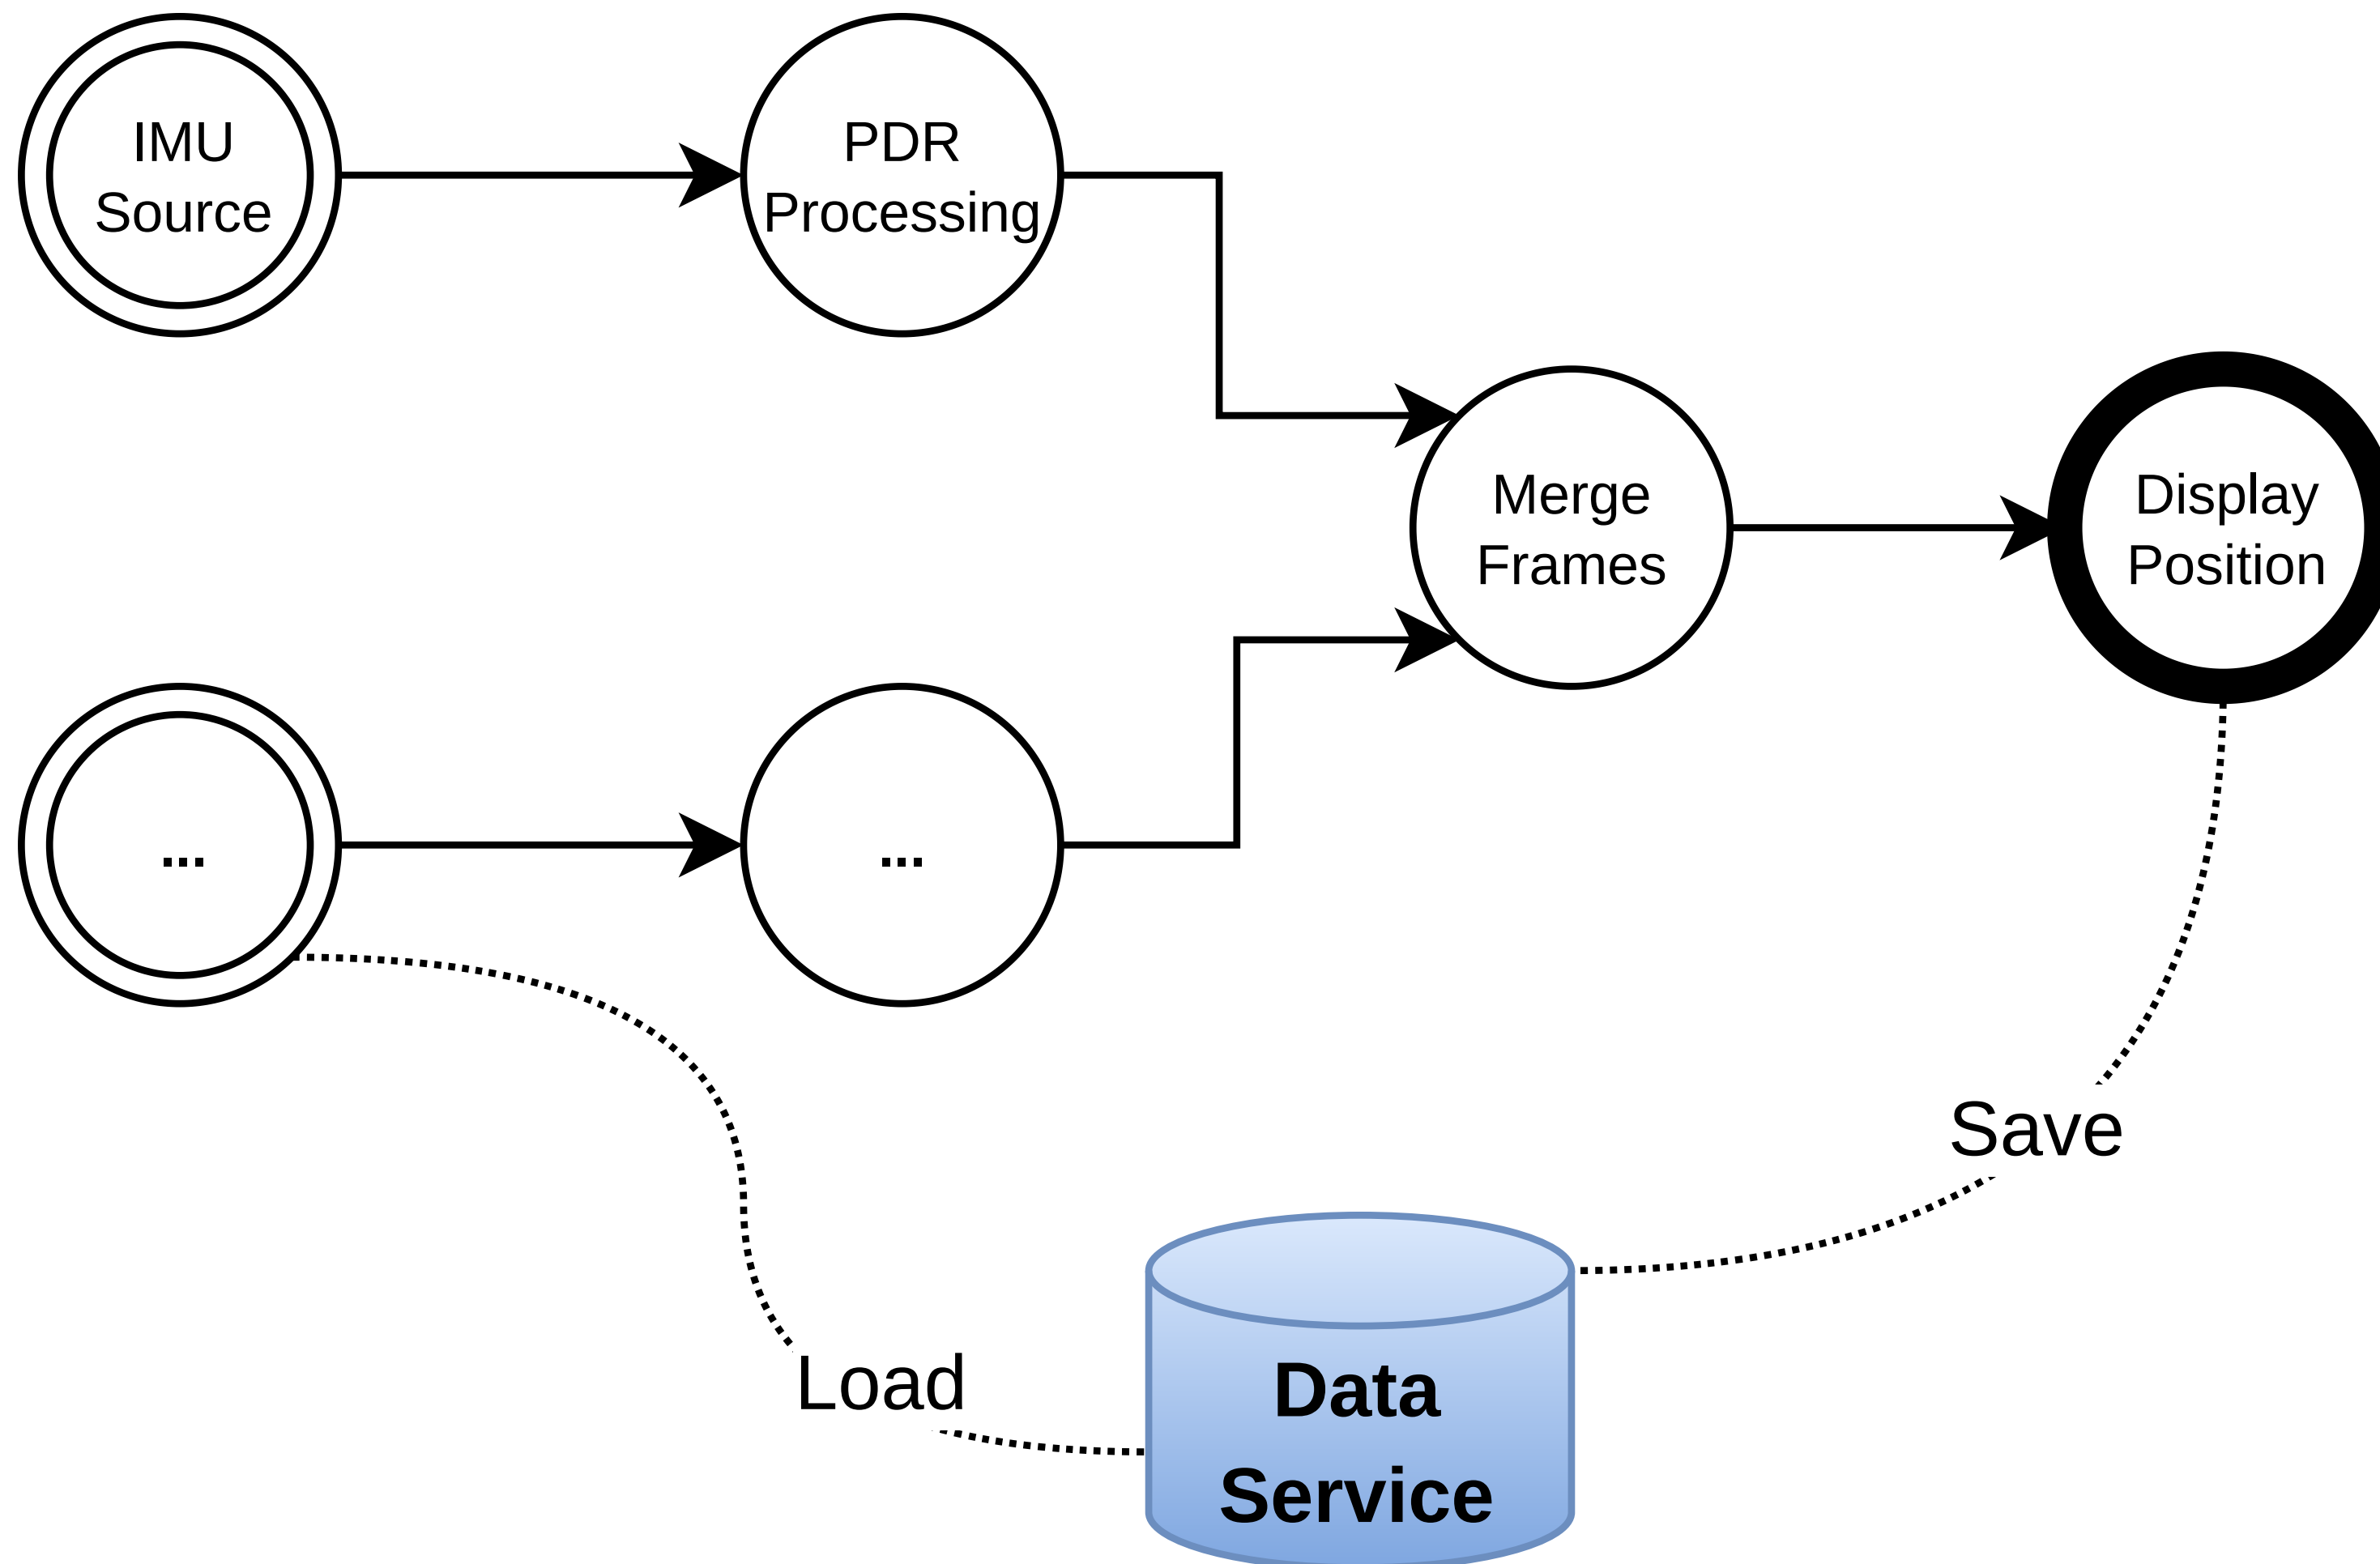

Process Network Design

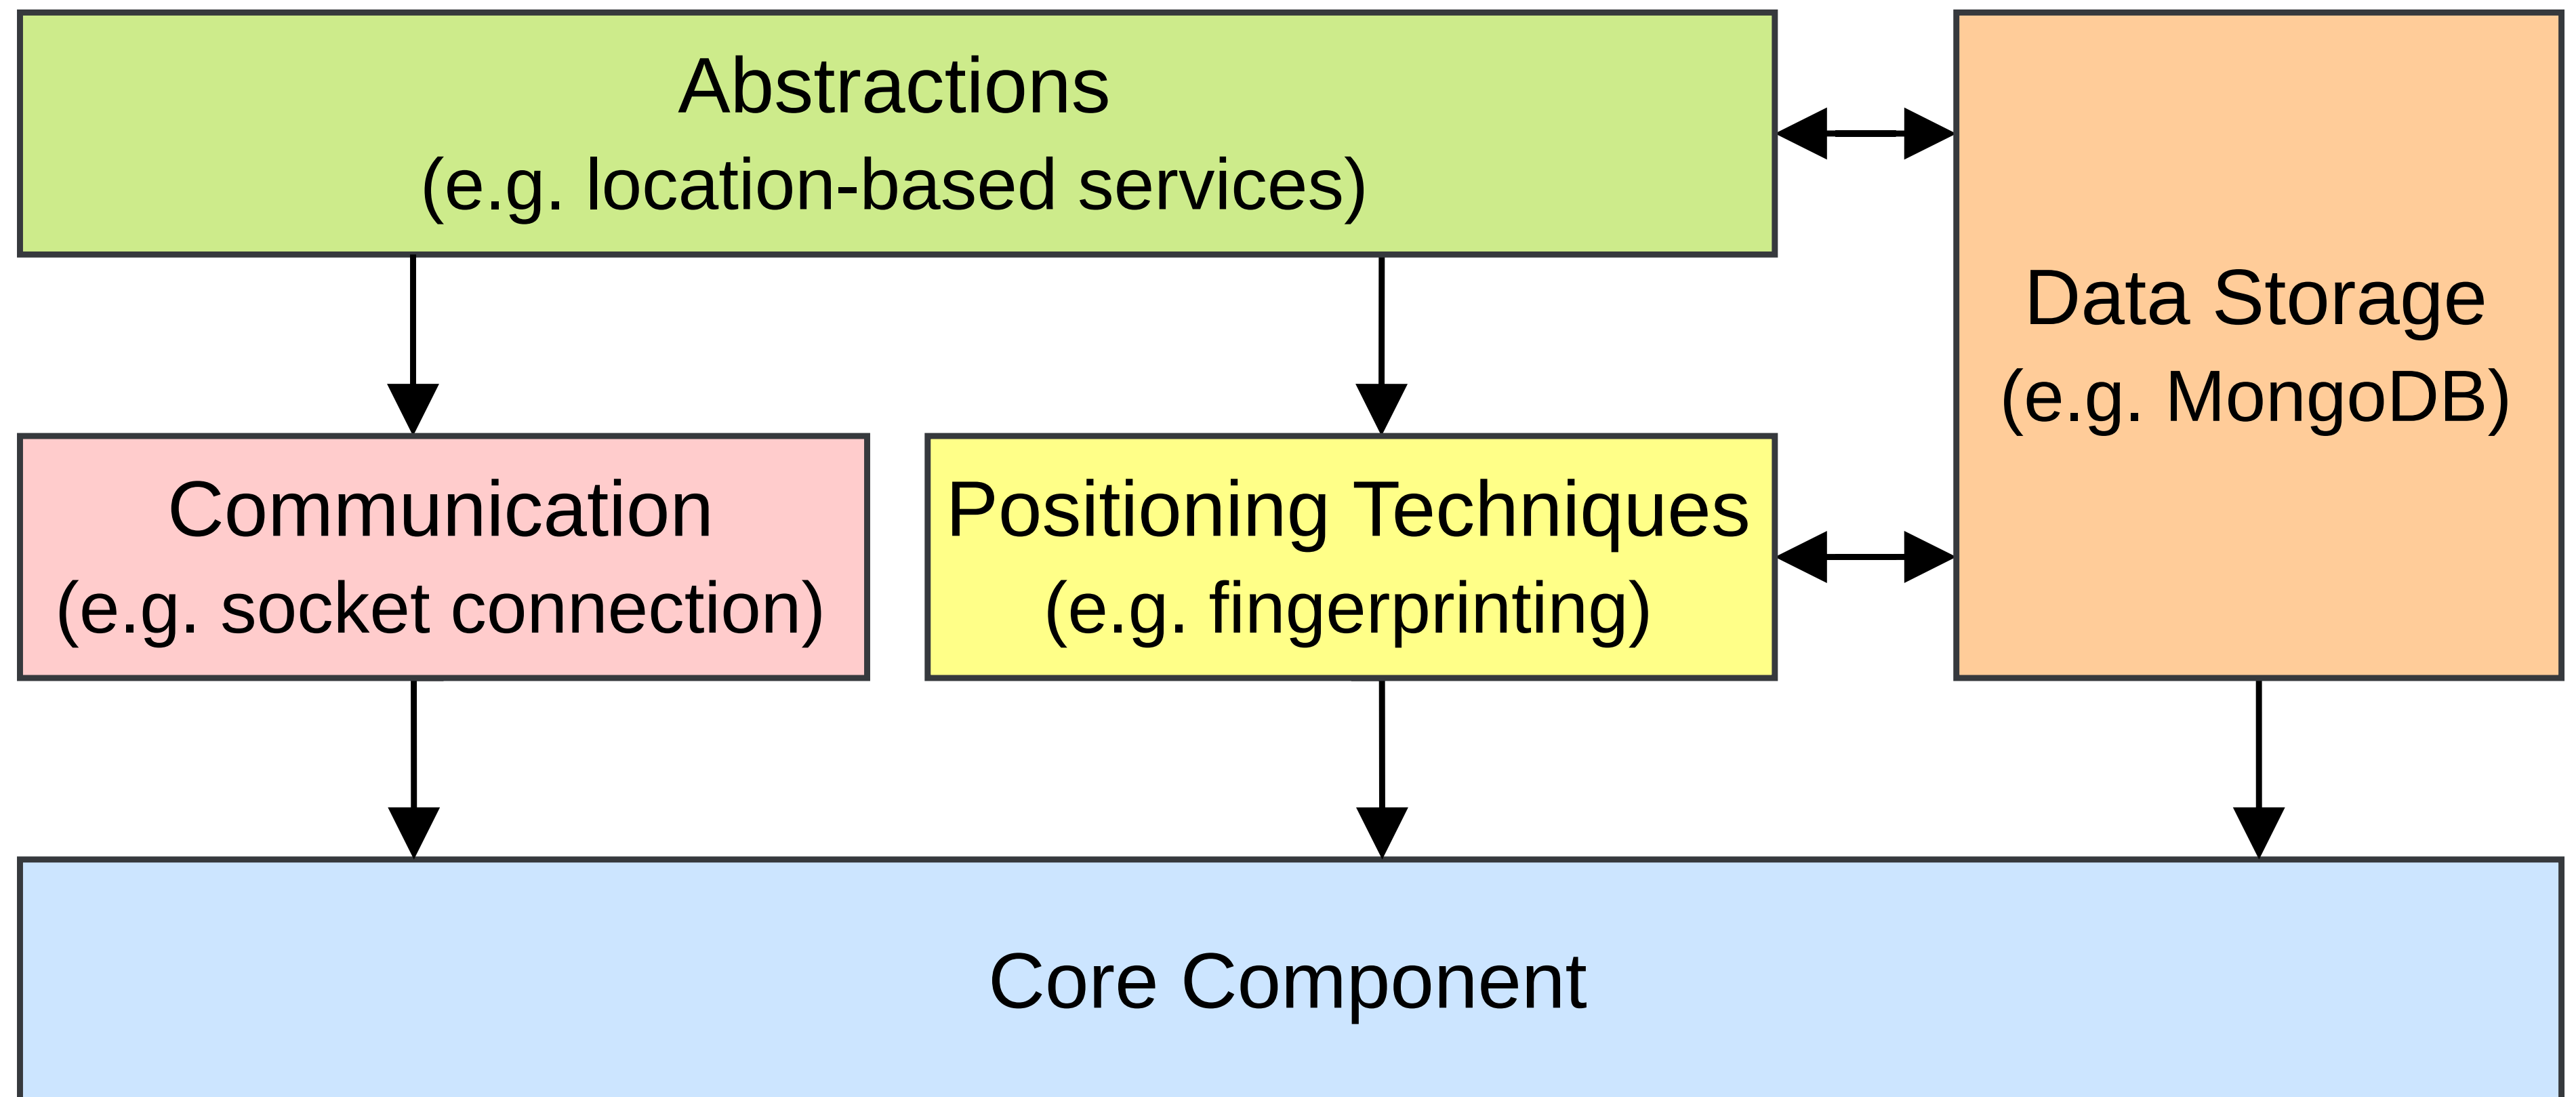

Process Network Design ...

Process Network Design ...

Modularity

Data Processing

Knowledge

Raw Data

Processed Data

DataObject

Absolute and Relative Positions

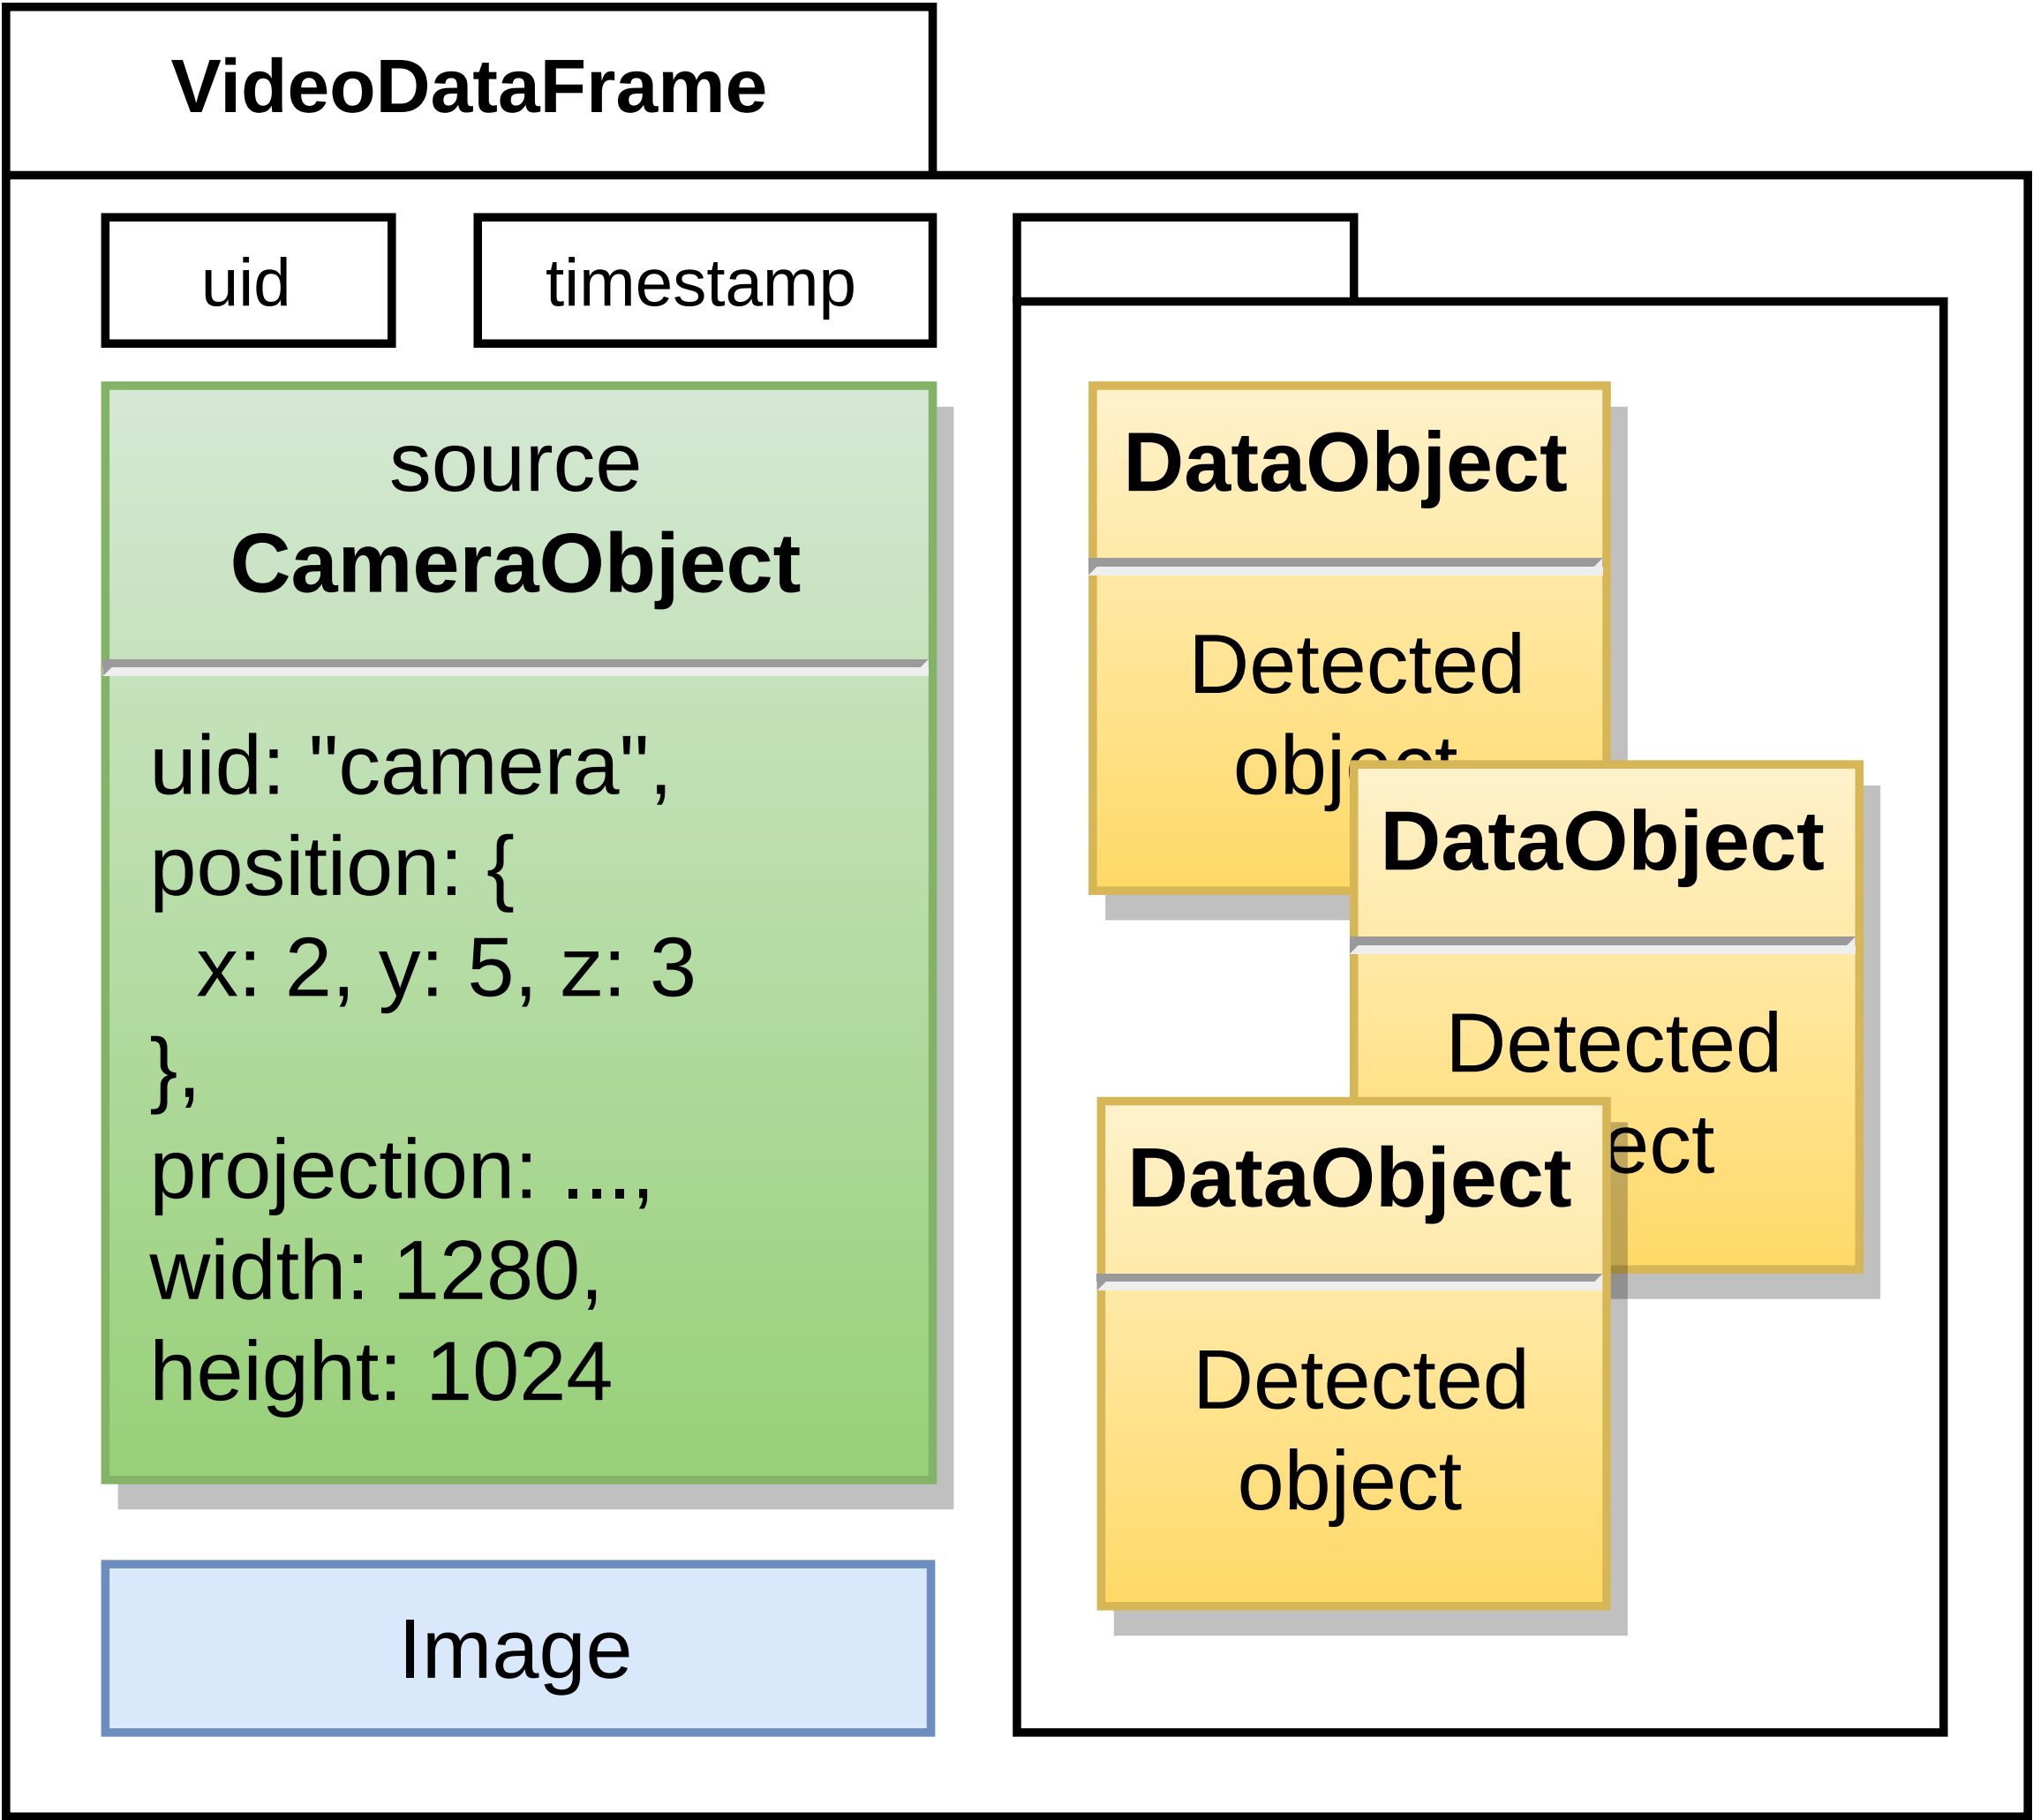

Absolute

- ▶ 2D, 3D, Geographical, ...

Relative

- ▶ Distance, angle, velocity, ...
- ▶ Relative to another *object*

DataFrame

SymbolicSpace

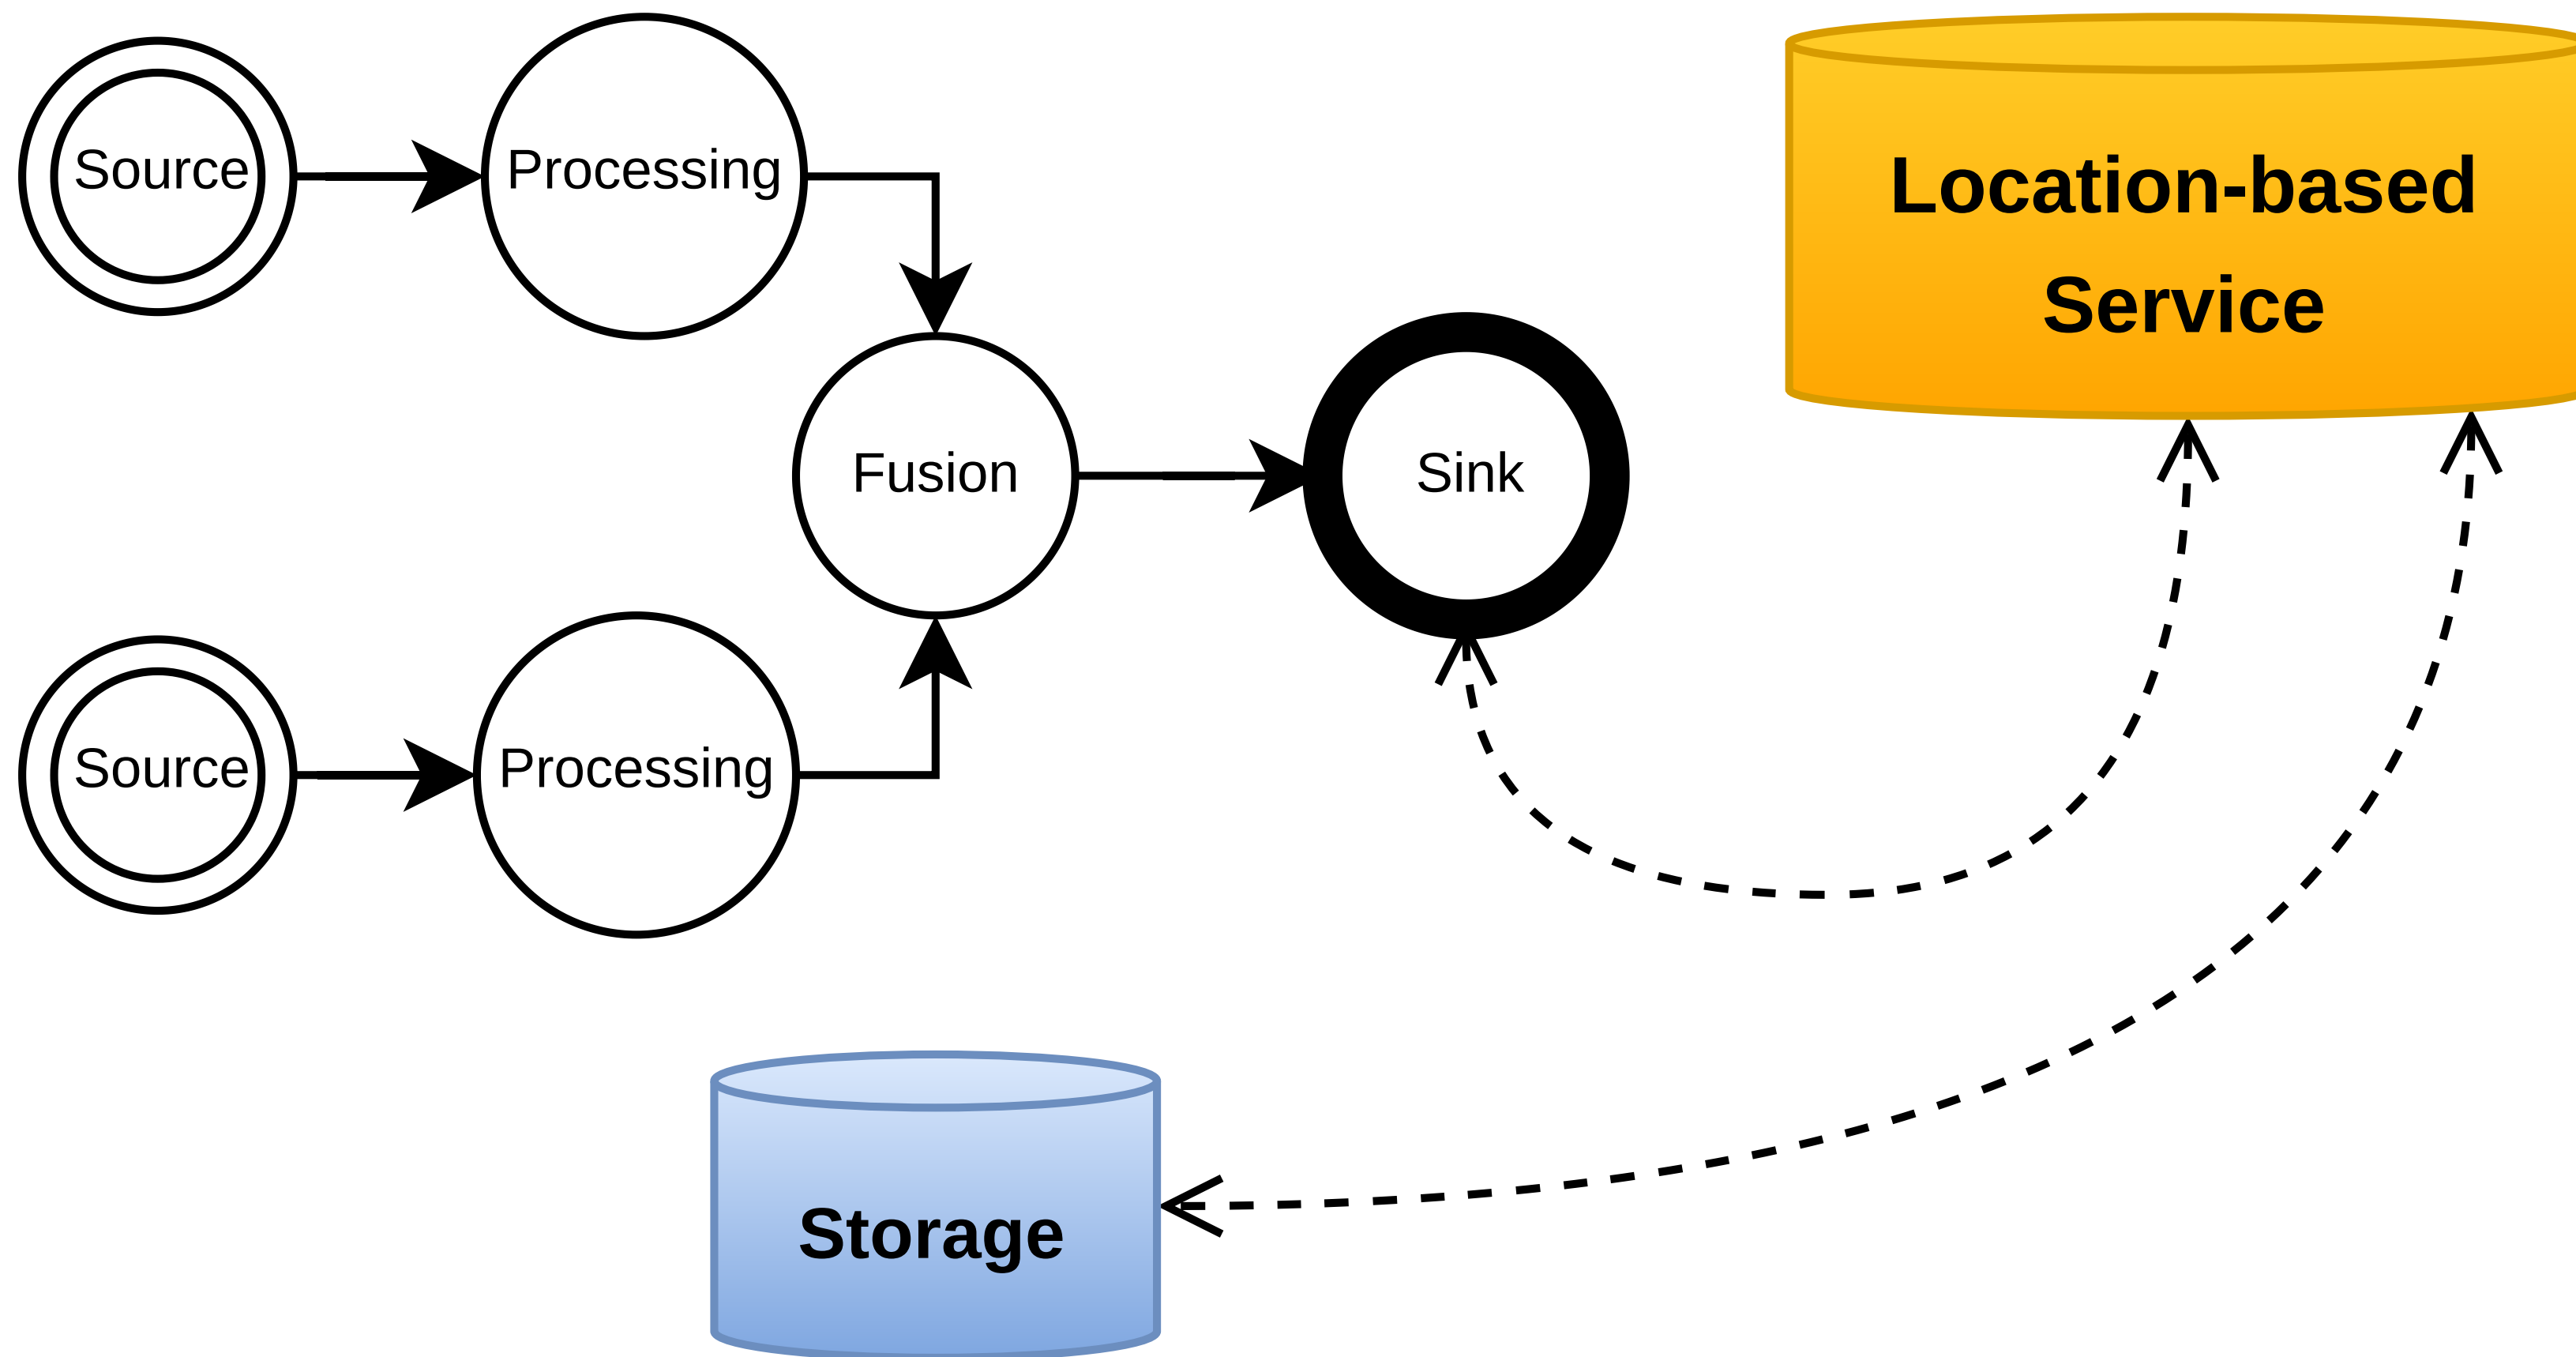

An object that semantically defines a space

- ▶ Spatial hierarchy
- ▶ Graph connectivity with other spaces
- ▶ Geocoding
- ▶ GeoJSON compatibility
- ▶ Can be used as a location
- ▶ Can be extended ...

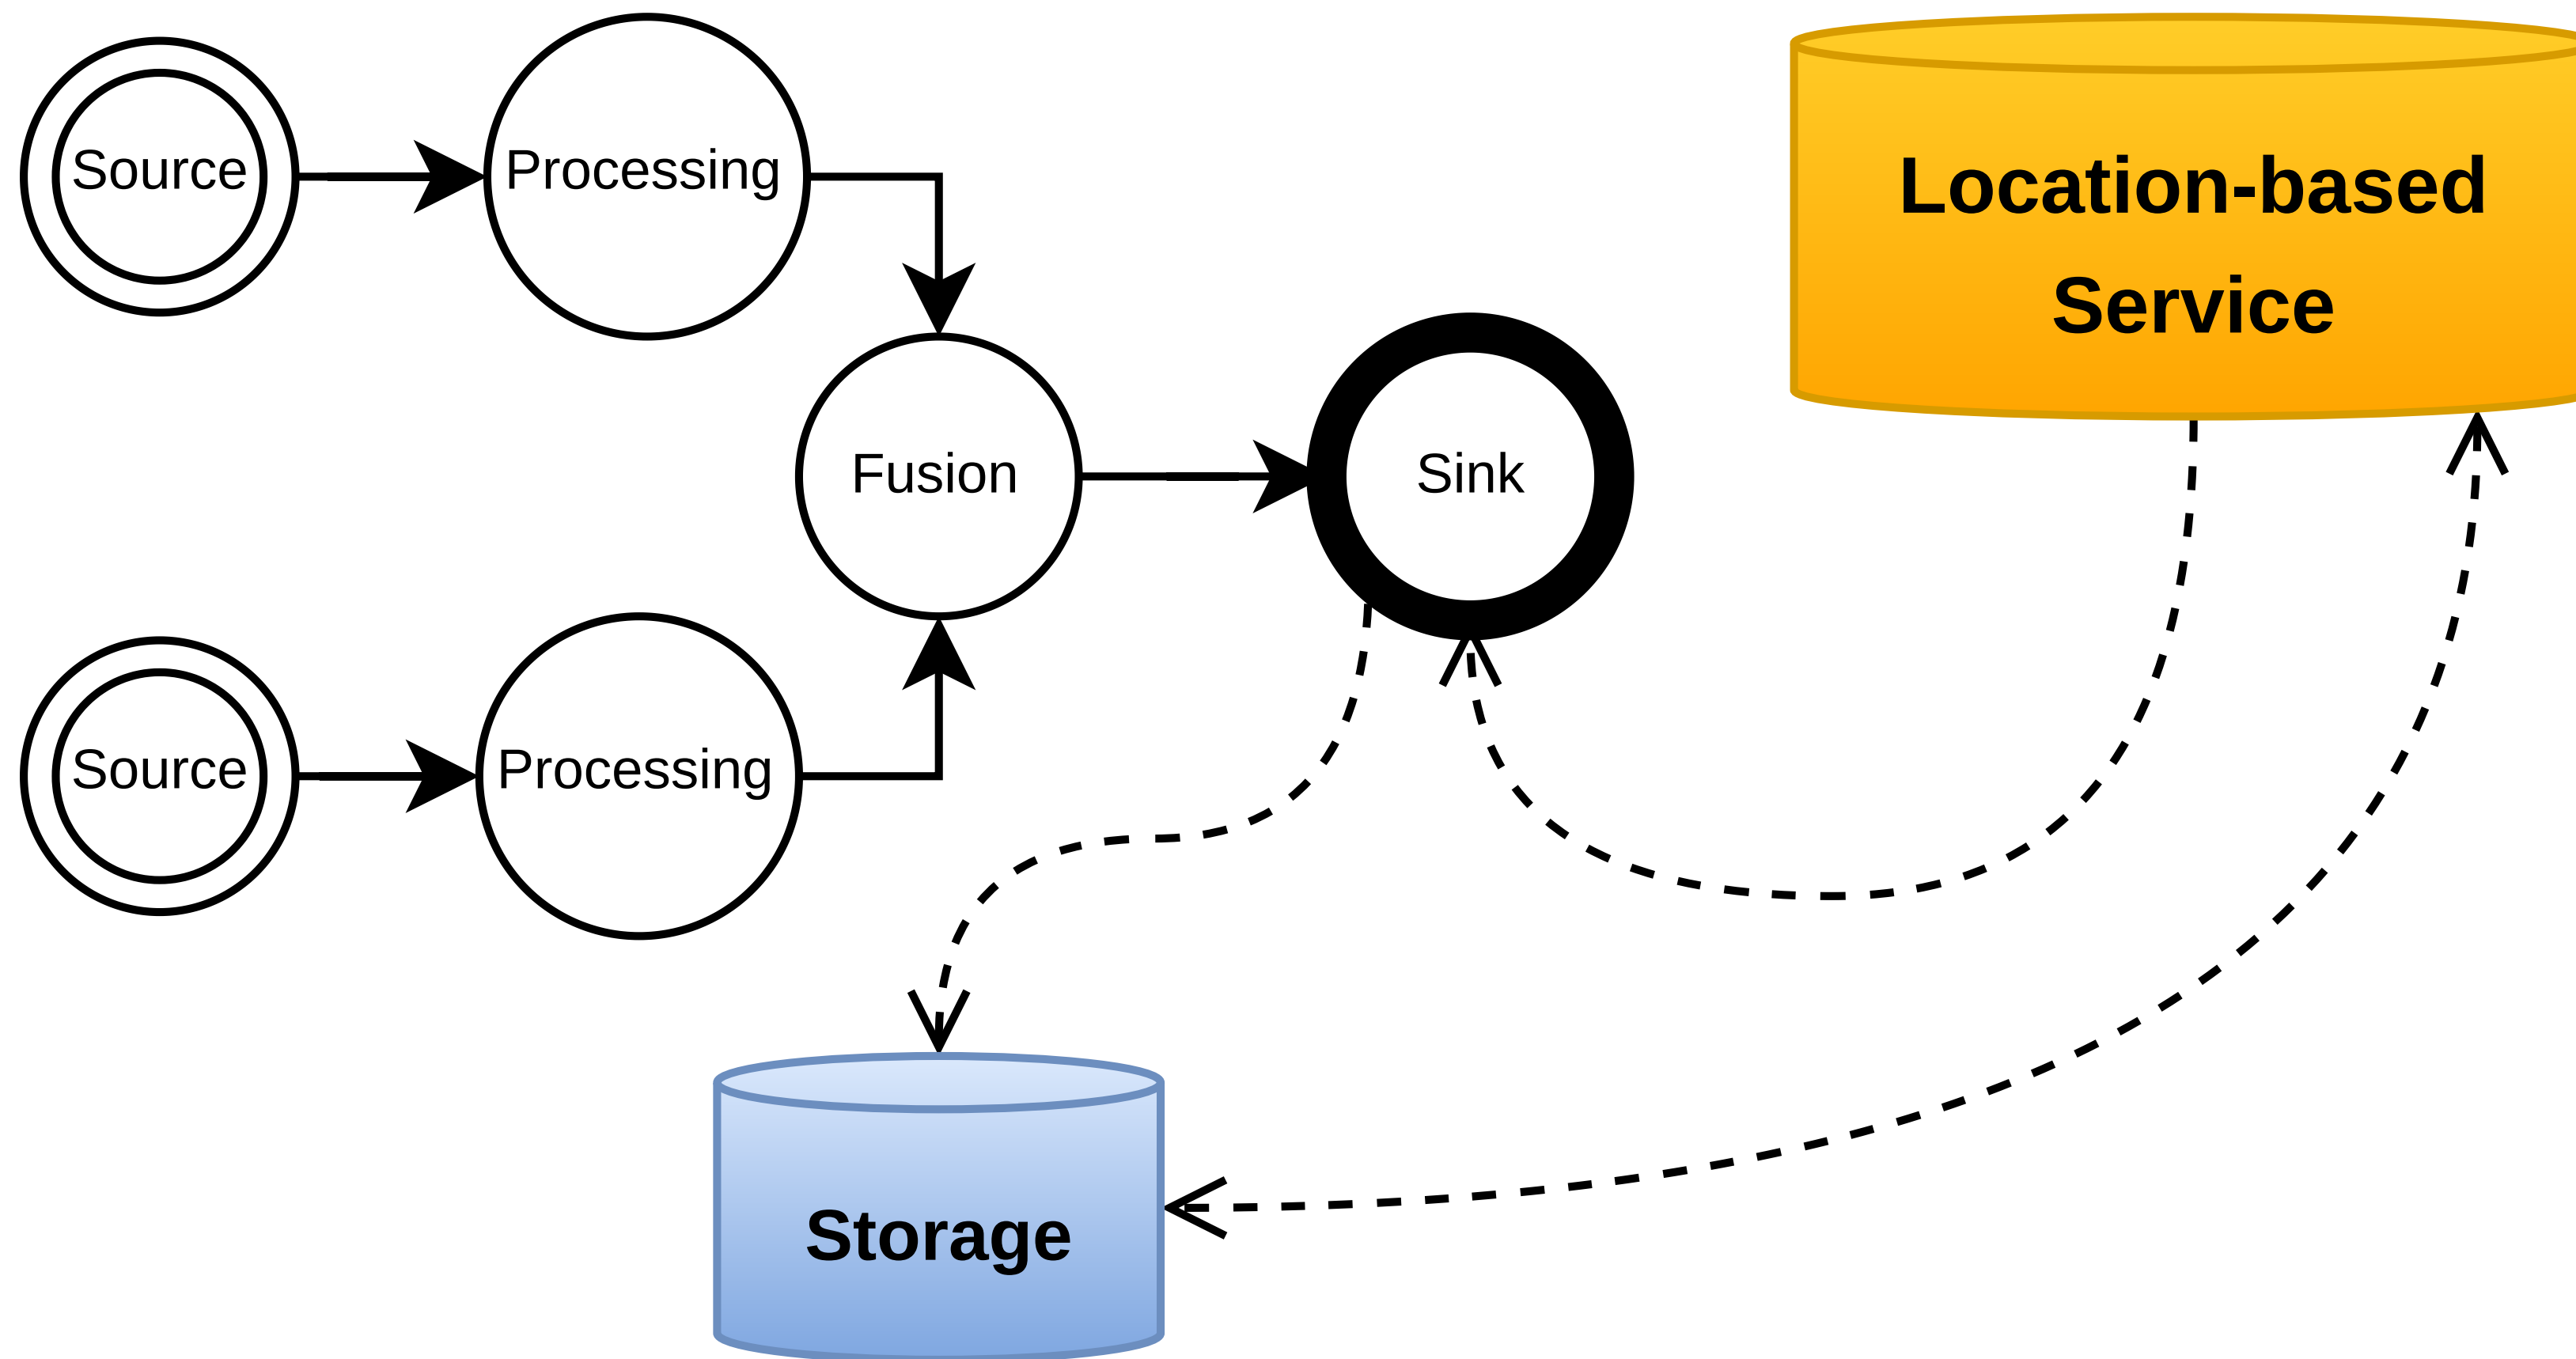

Location-based Service

`getCurrentPosition("me", ...)`

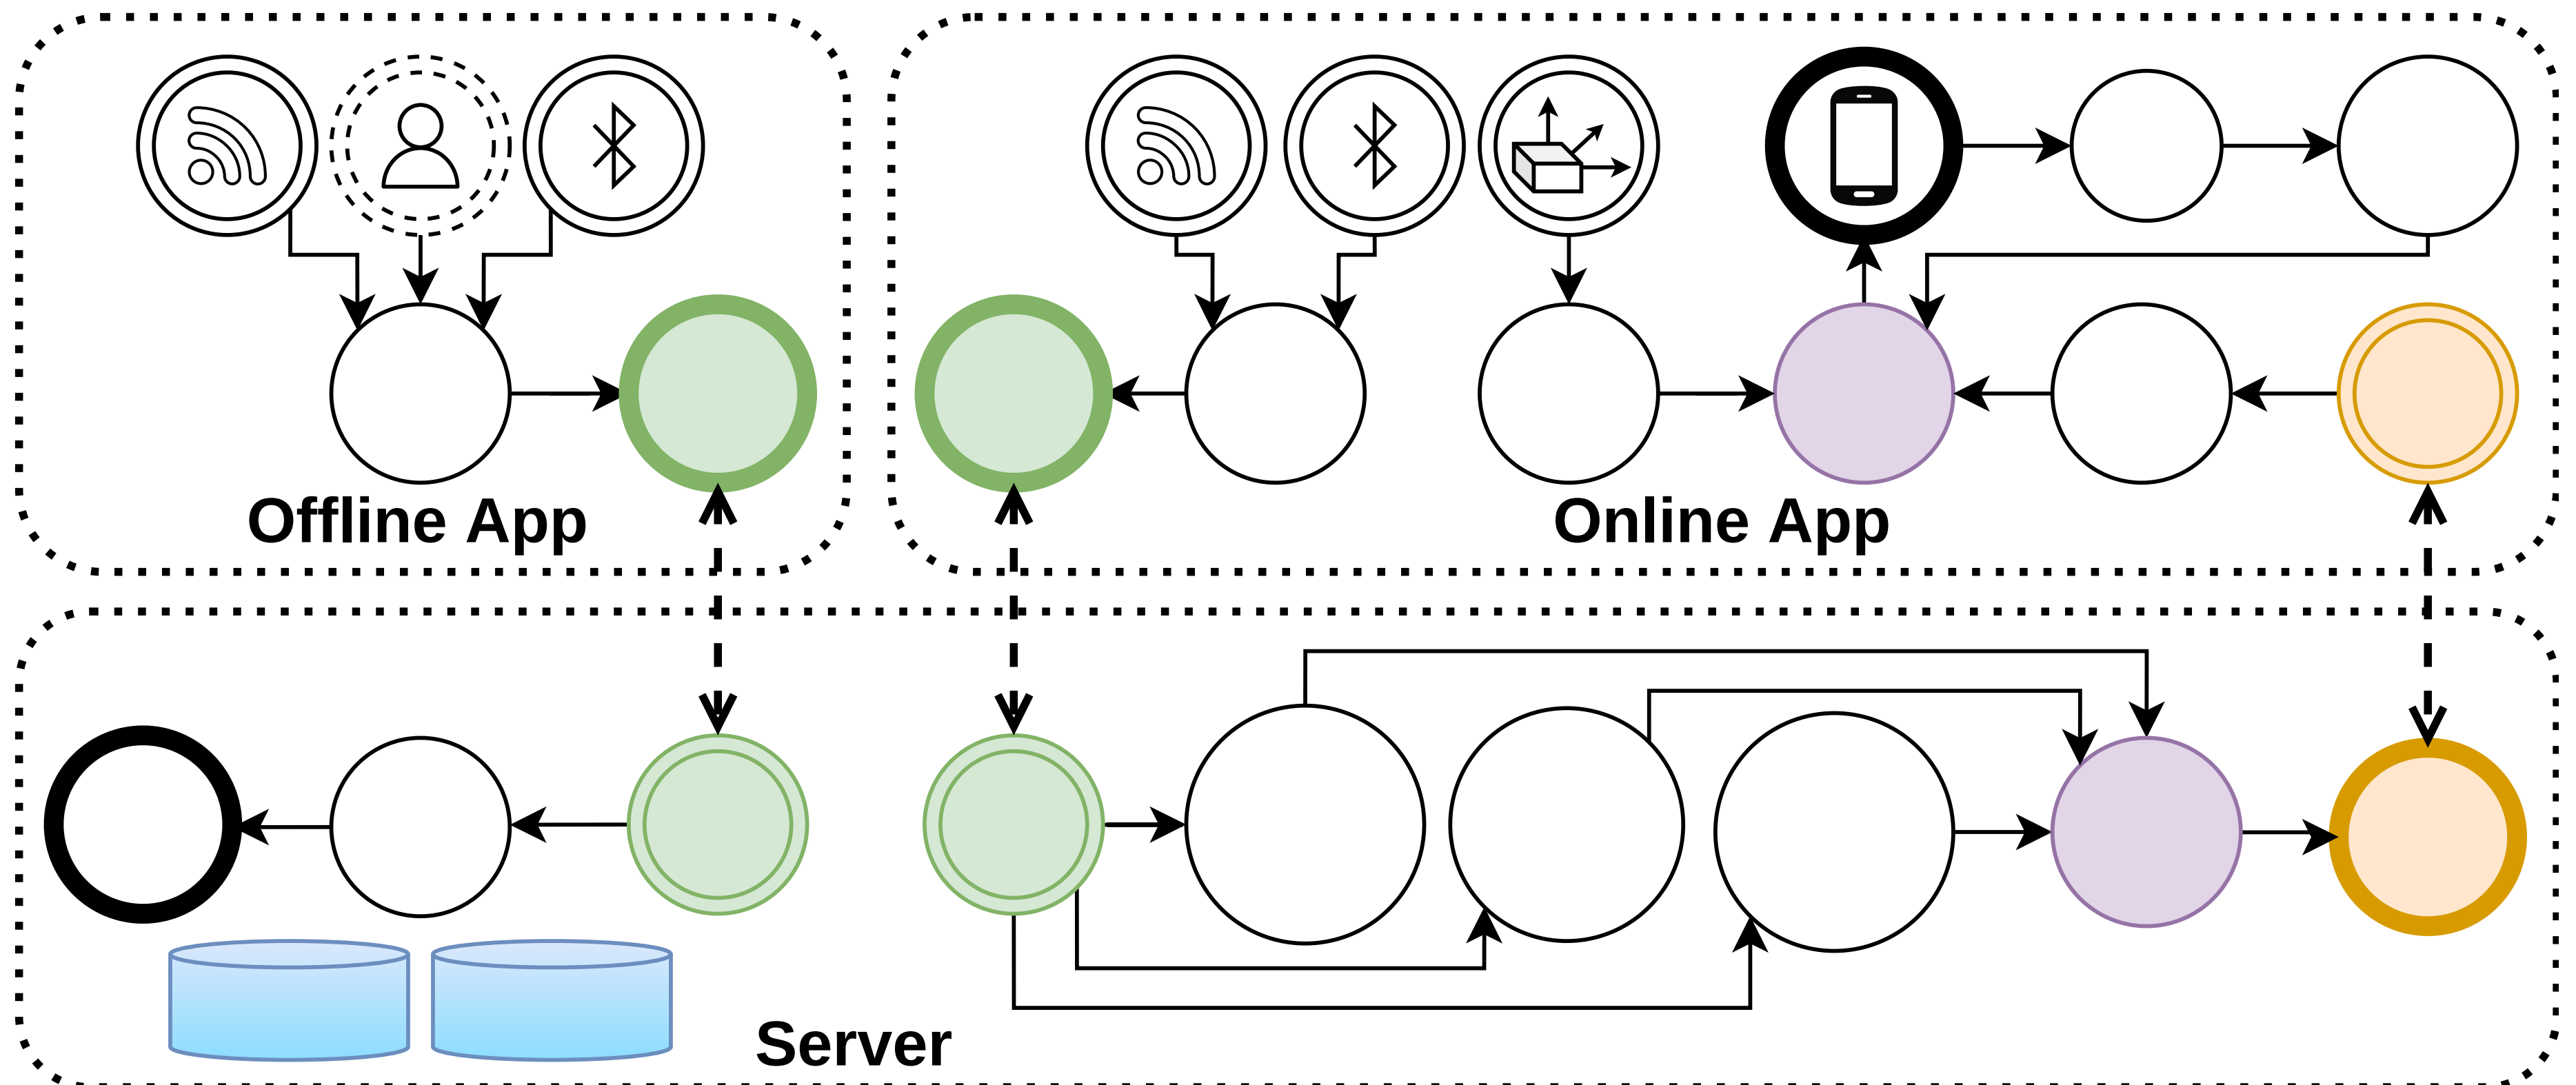

Location-based Service ...

`watchPosition("me", ...)`

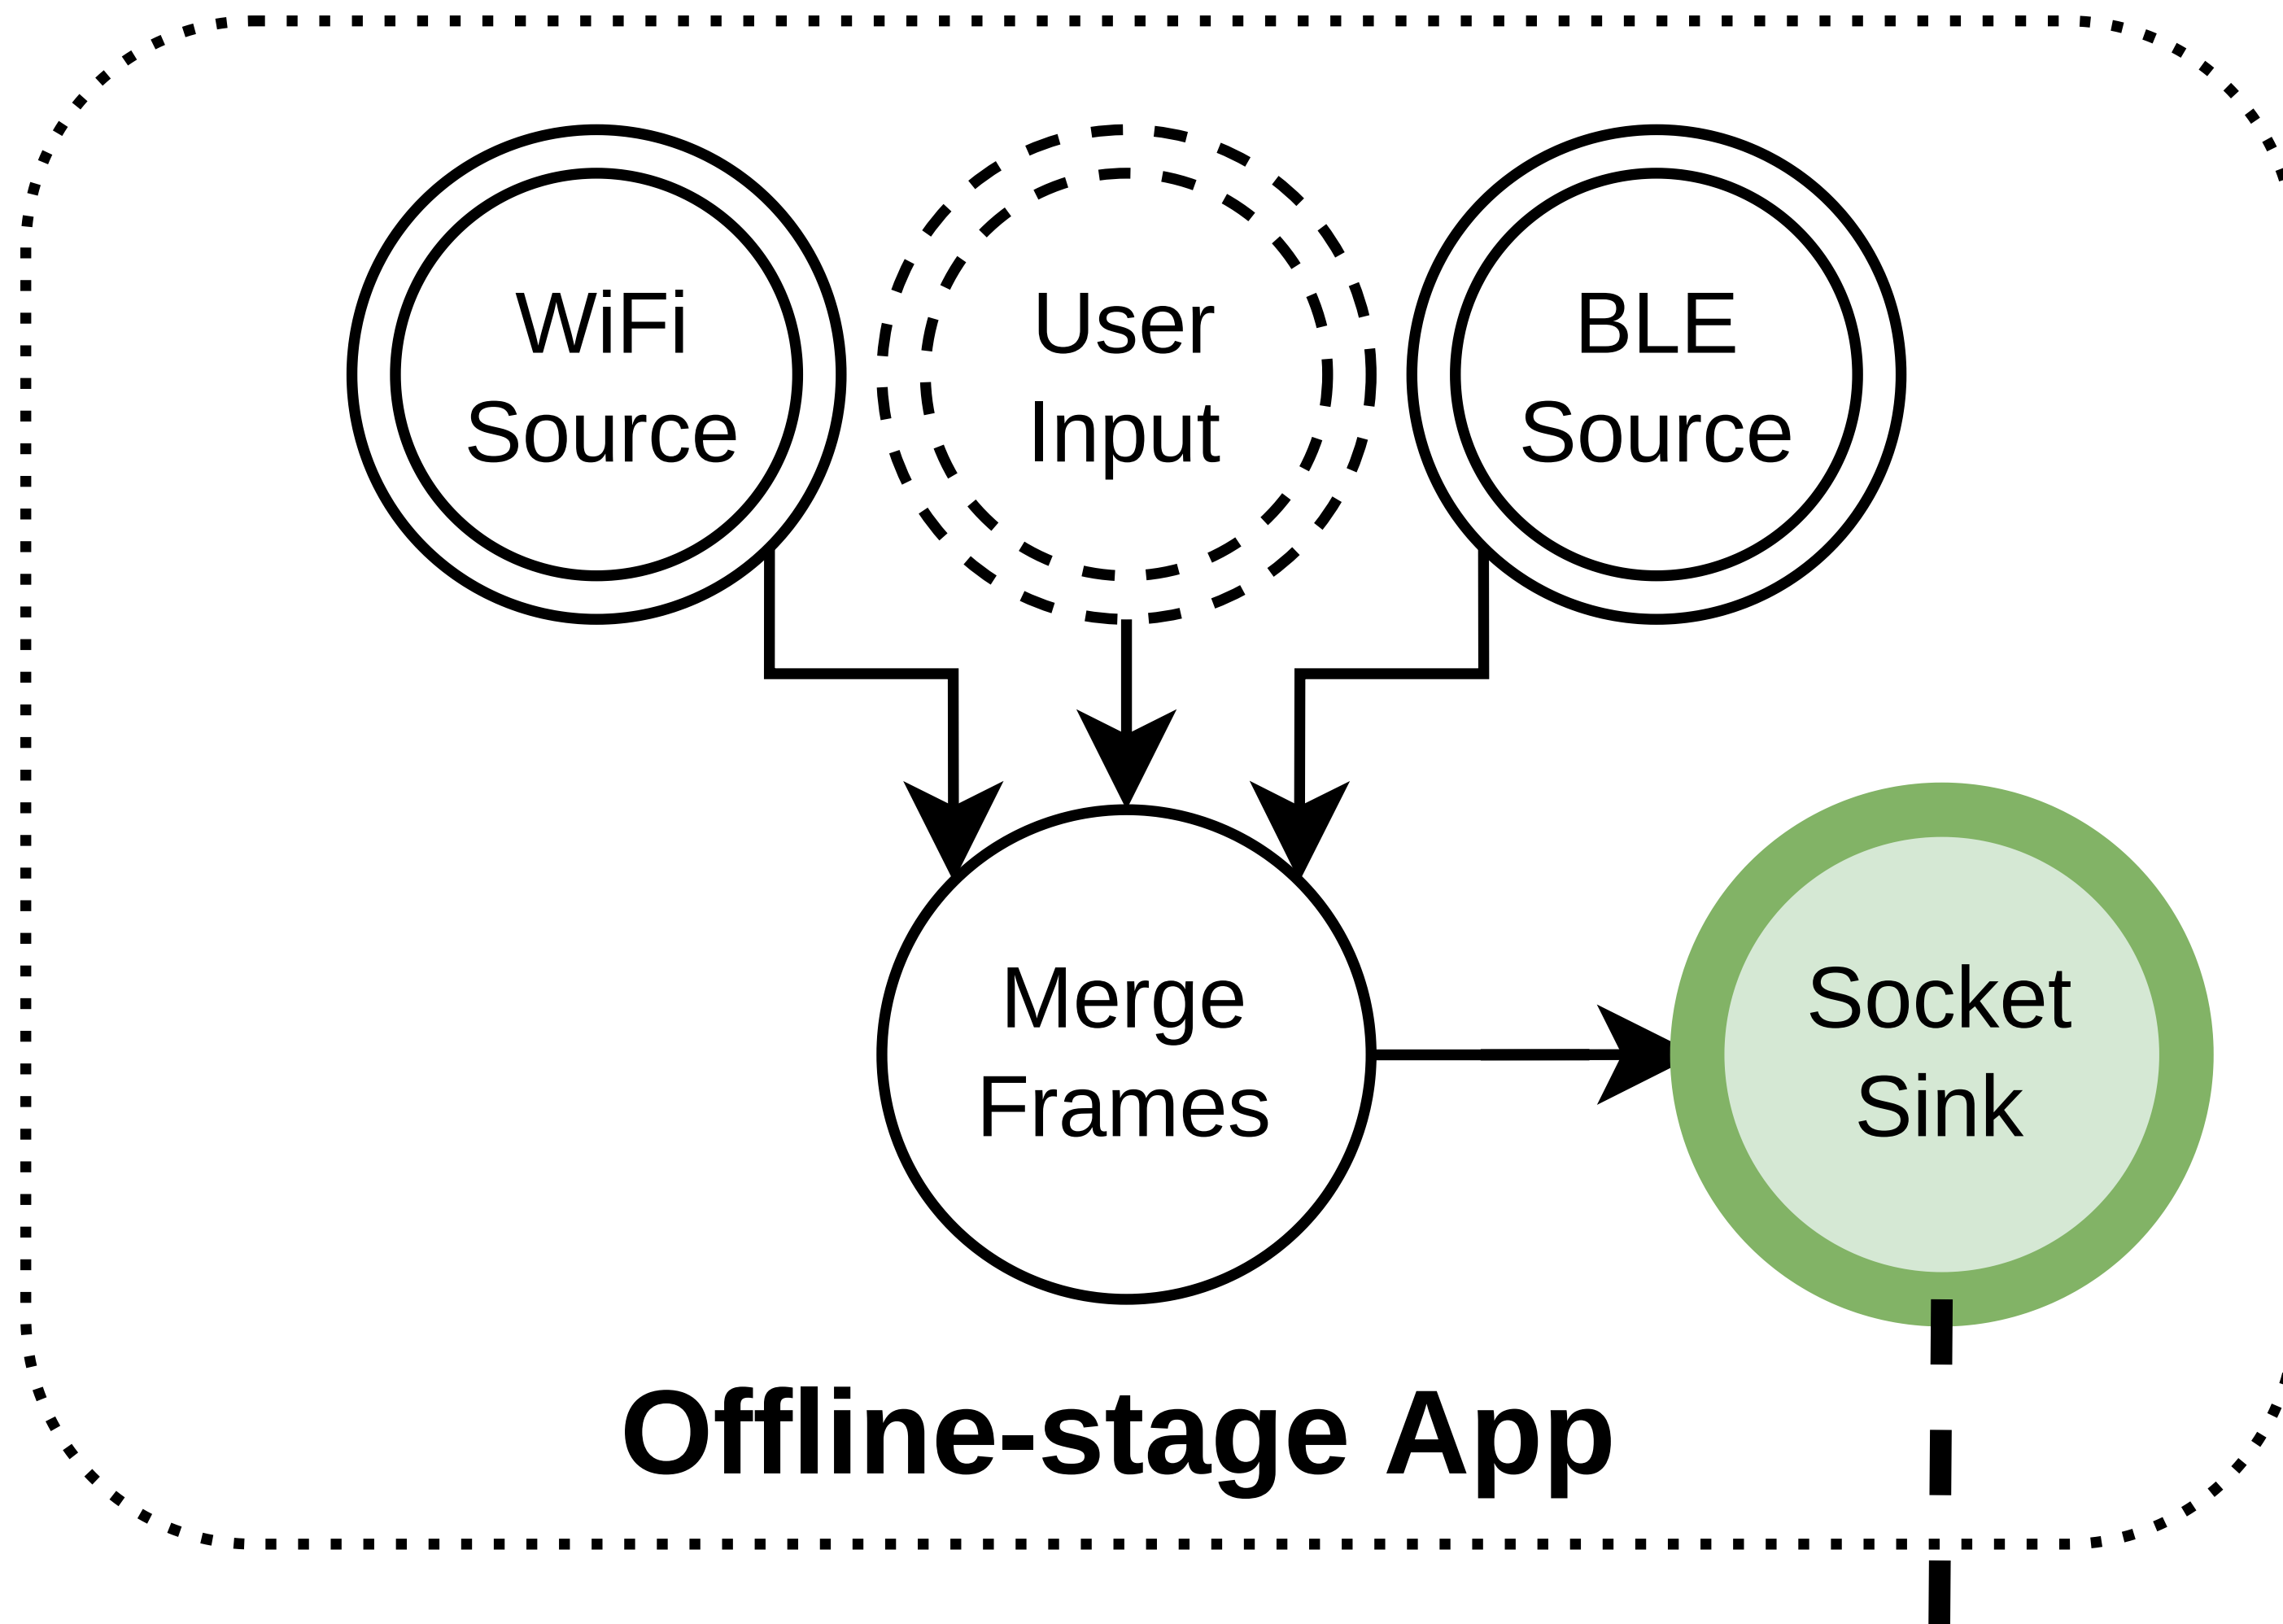

Demonstration

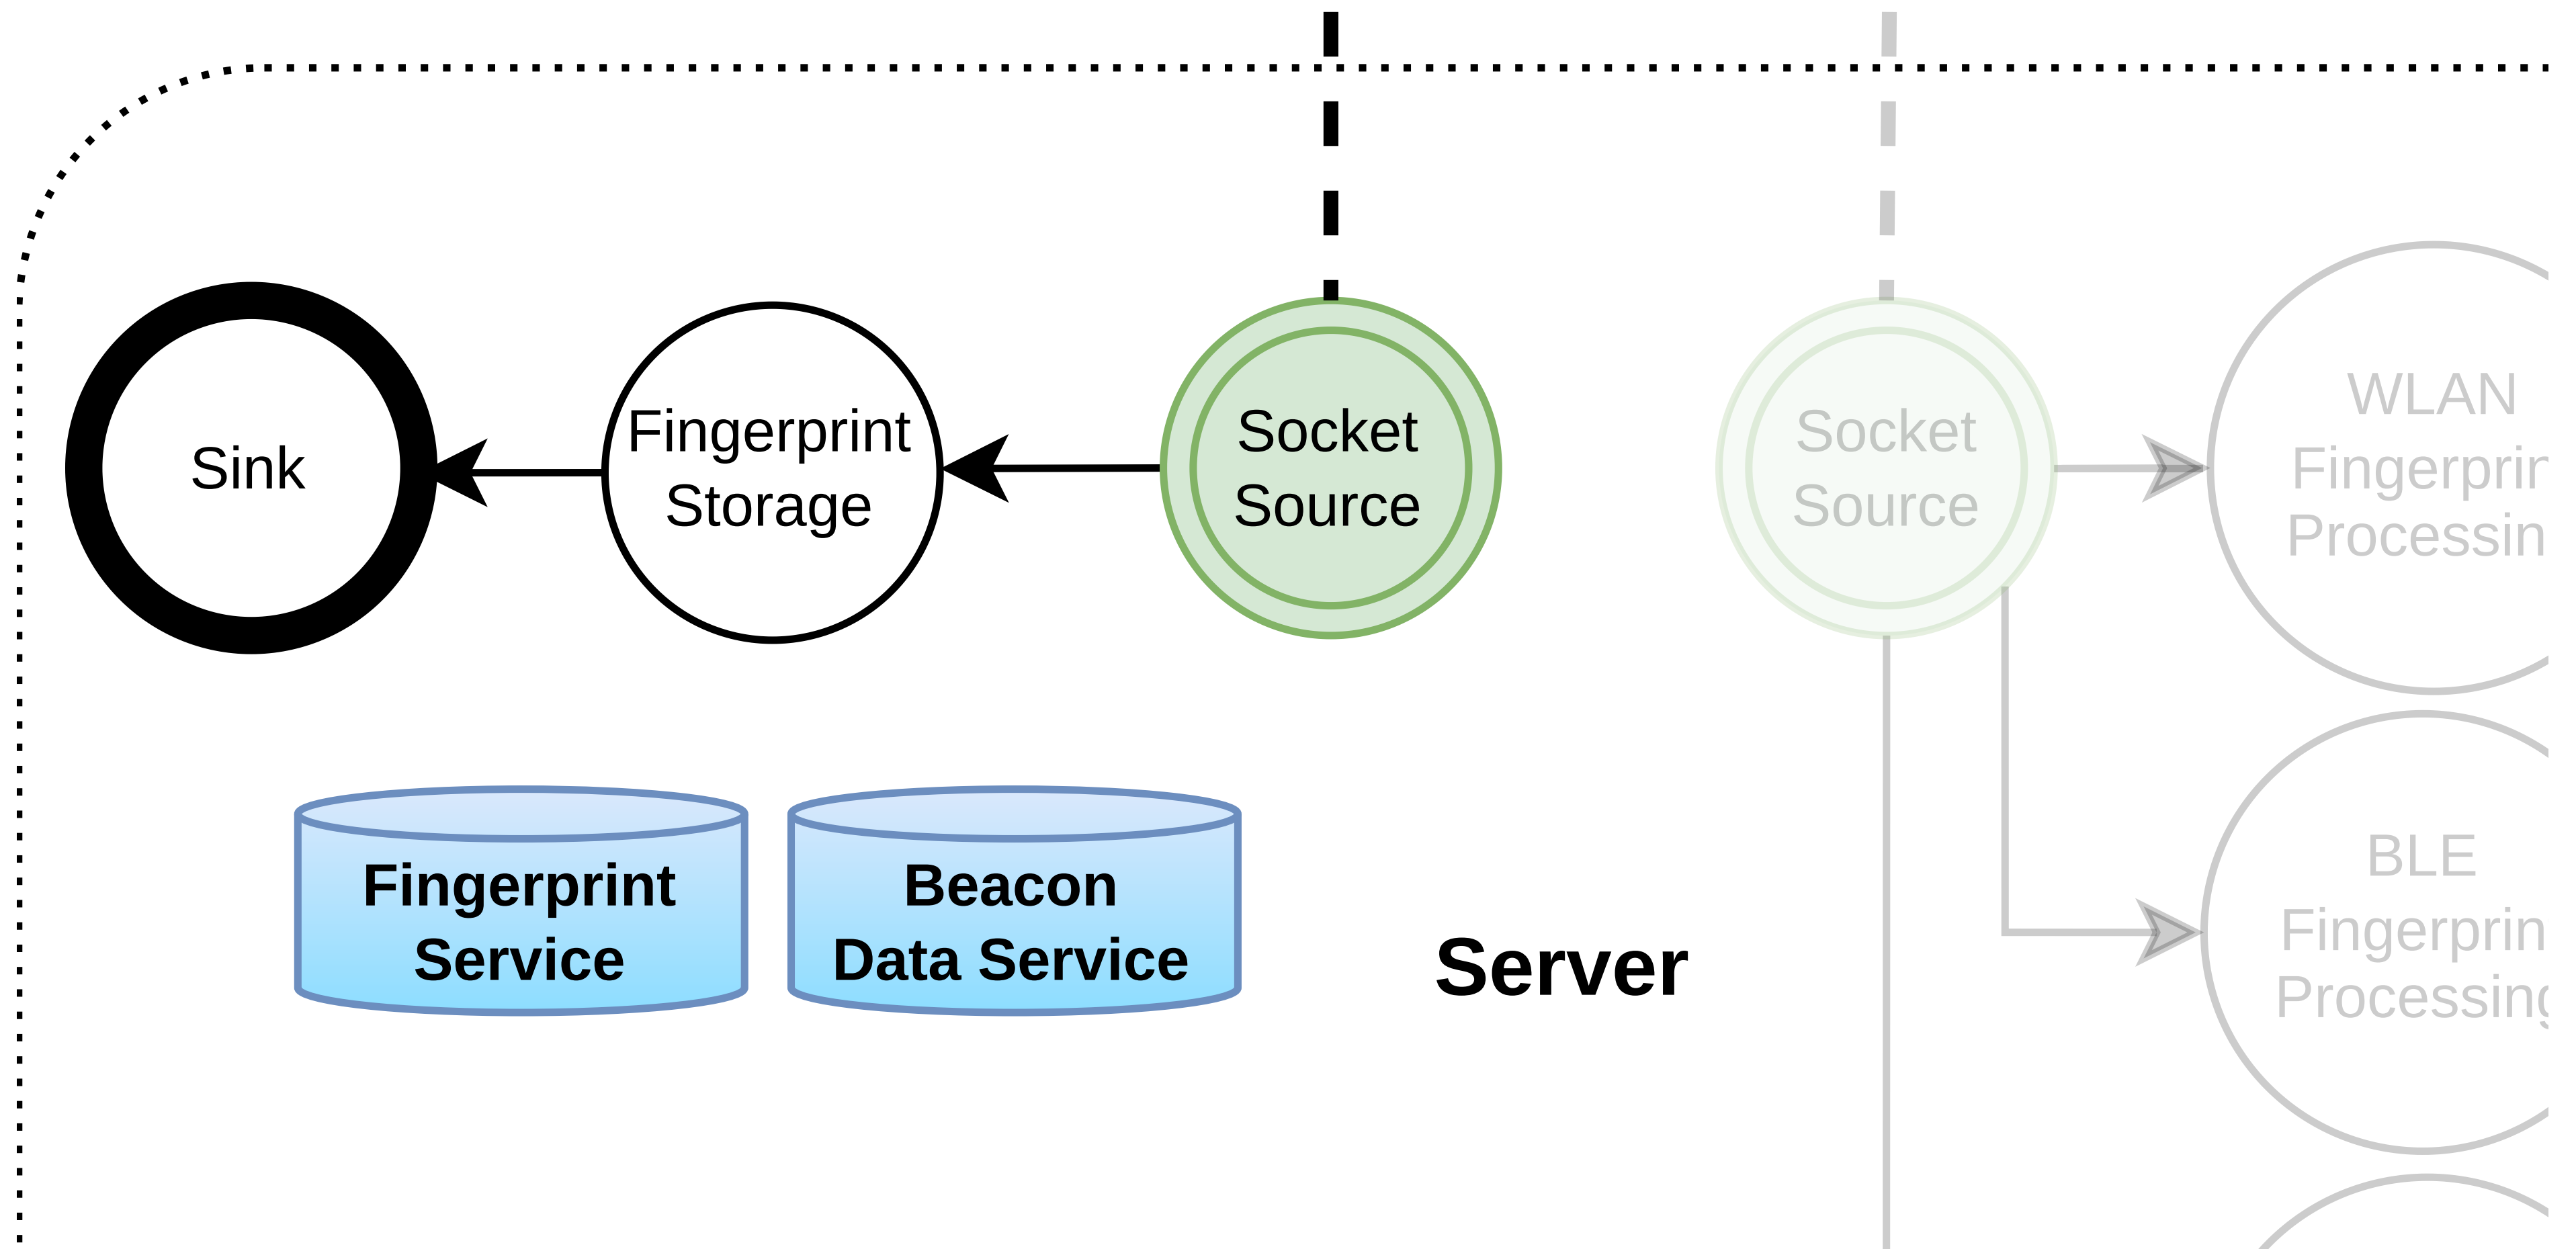

- ▶ Indoor positioning **use case**
- ▶ Use **existing techniques**
- ▶ Validation of **flexibility** and modularity

Dataset

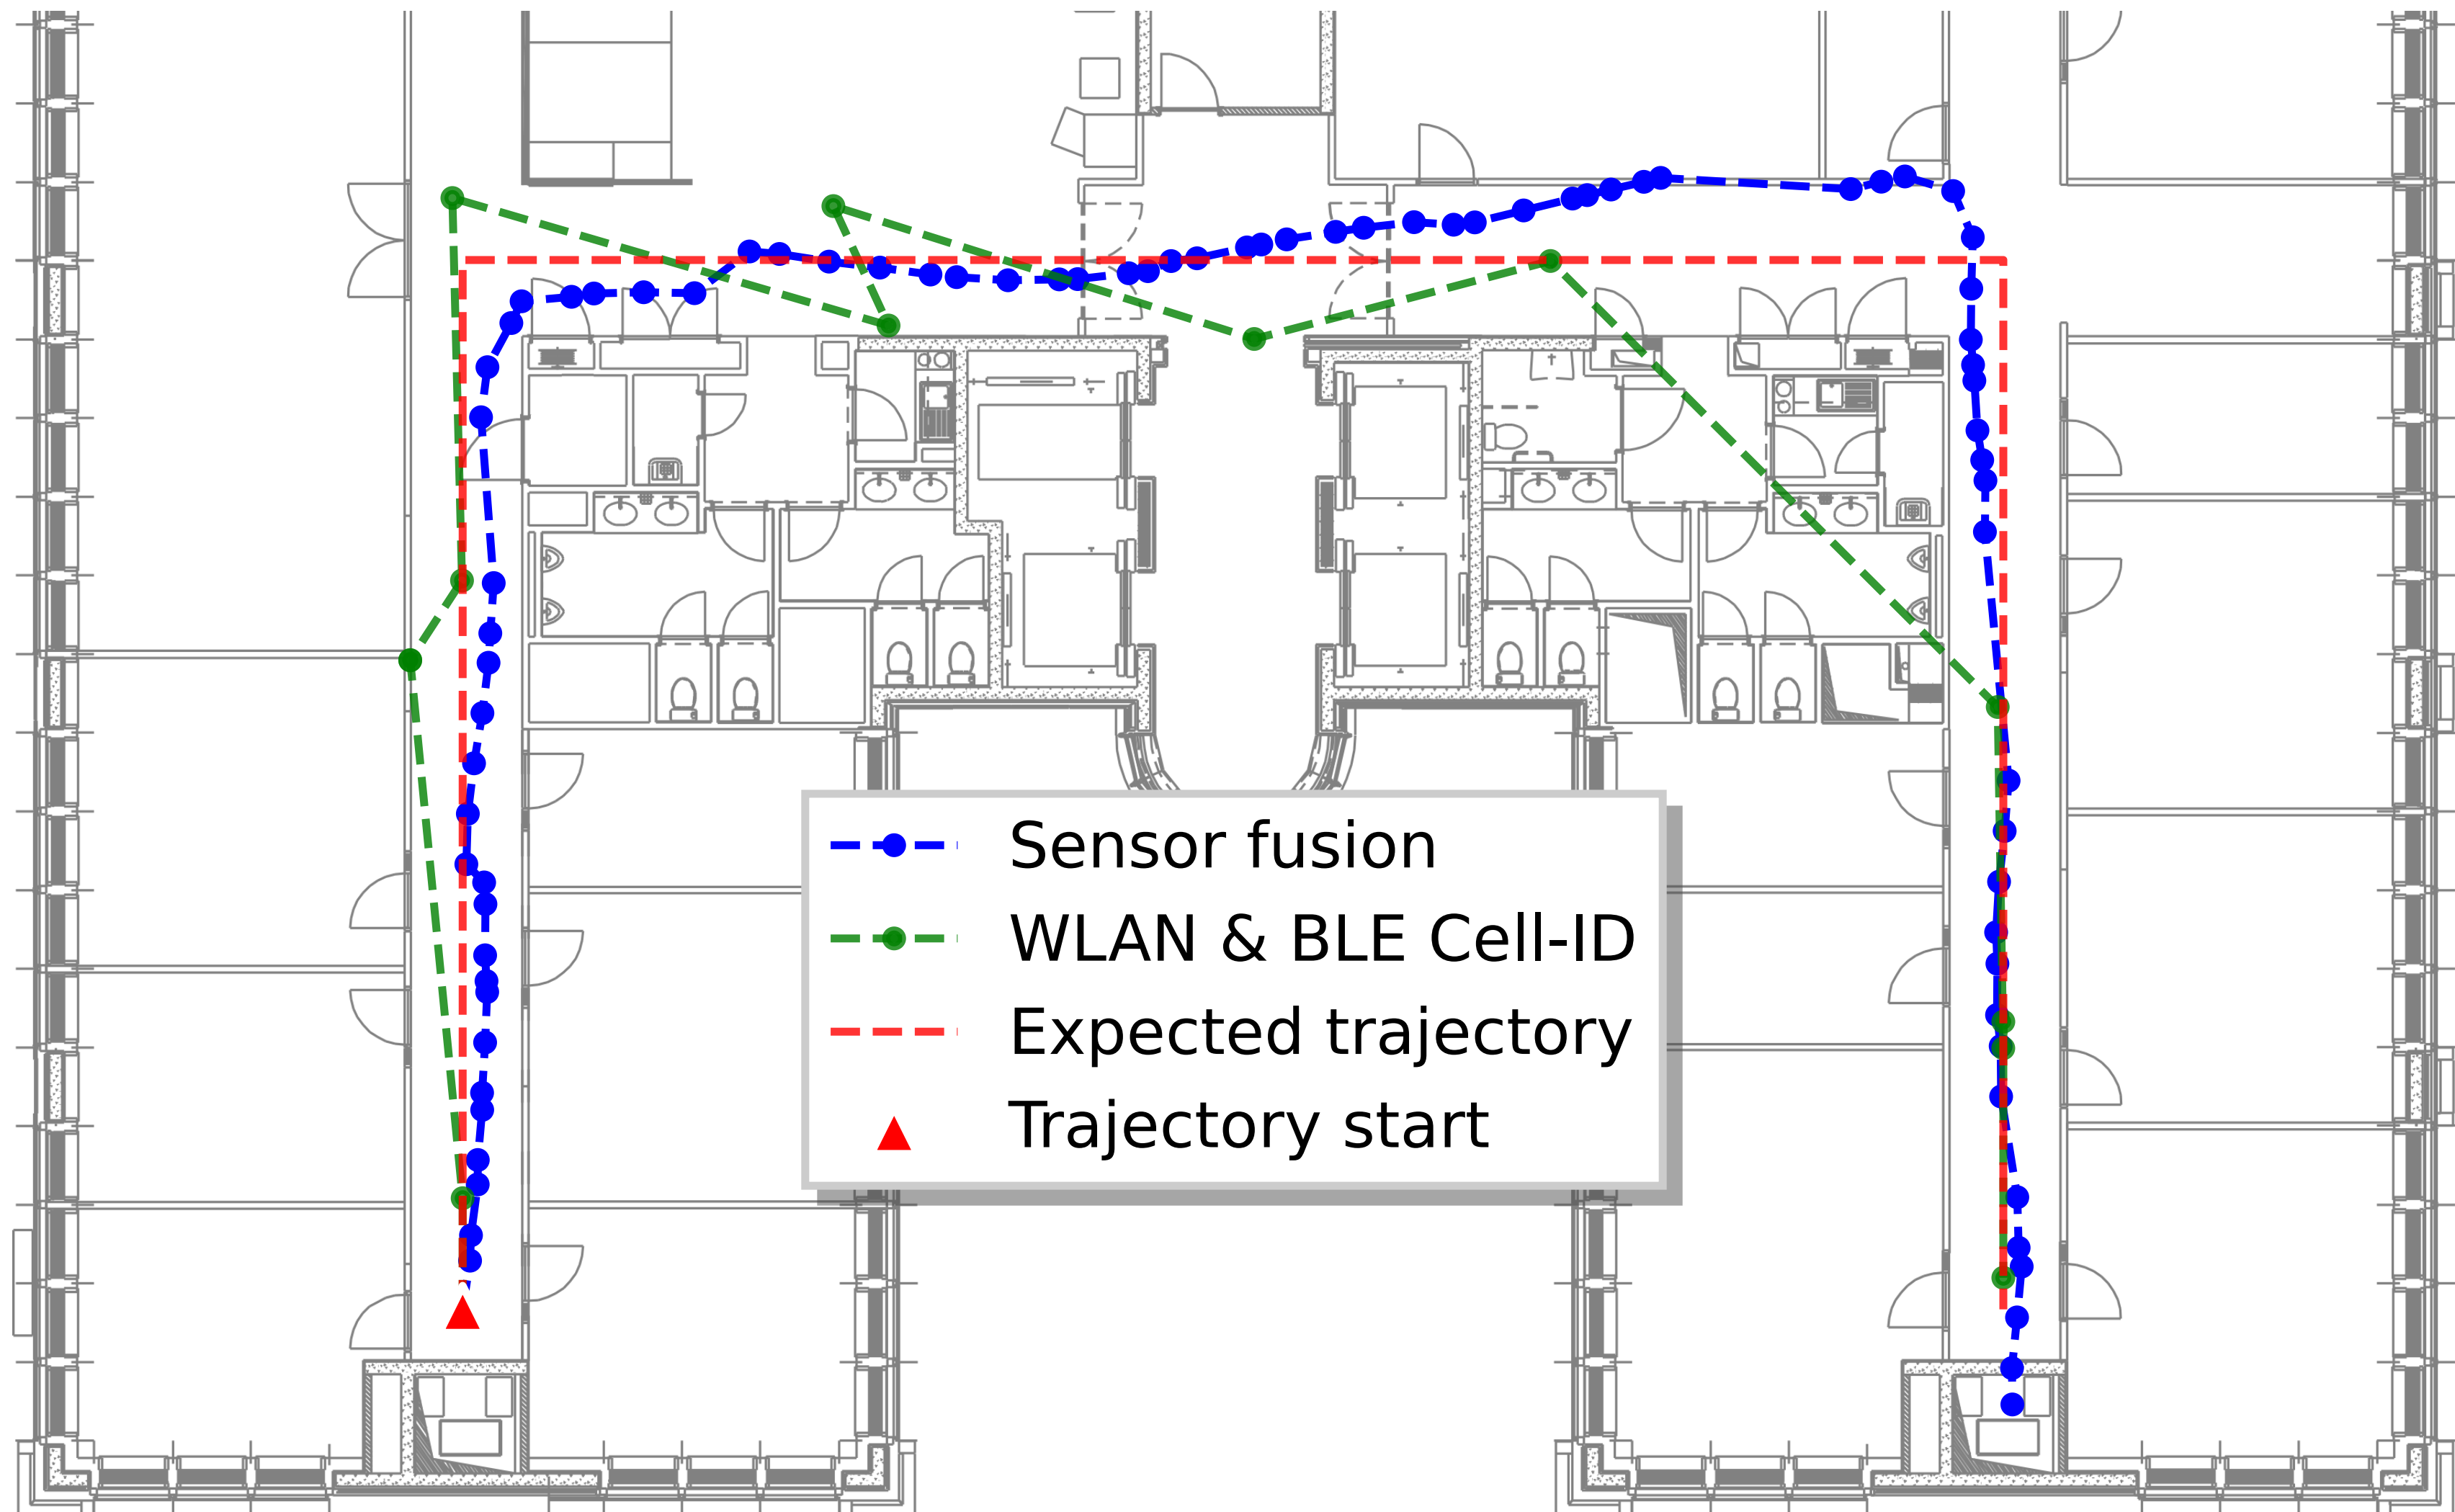

Validation Results

Static Positioning

	WLAN fingerprinting	BLE fingerprinting	BLE multilateration	Fusion
<i>failed points</i>	0	6	12	0
<i>average error</i>	1.23 m	3.23 m	4.92 m	1.37 m
<i>minimum error</i>	0.01 m	0.17 m	0.74 m	0.01 m
<i>maximum error</i>	4.77 m	15.39 m	19.26 m	9.75 m
<i>hit rate</i>	95.82 %	80.83 %	52.50 %	96.67 %

Validation Results ...

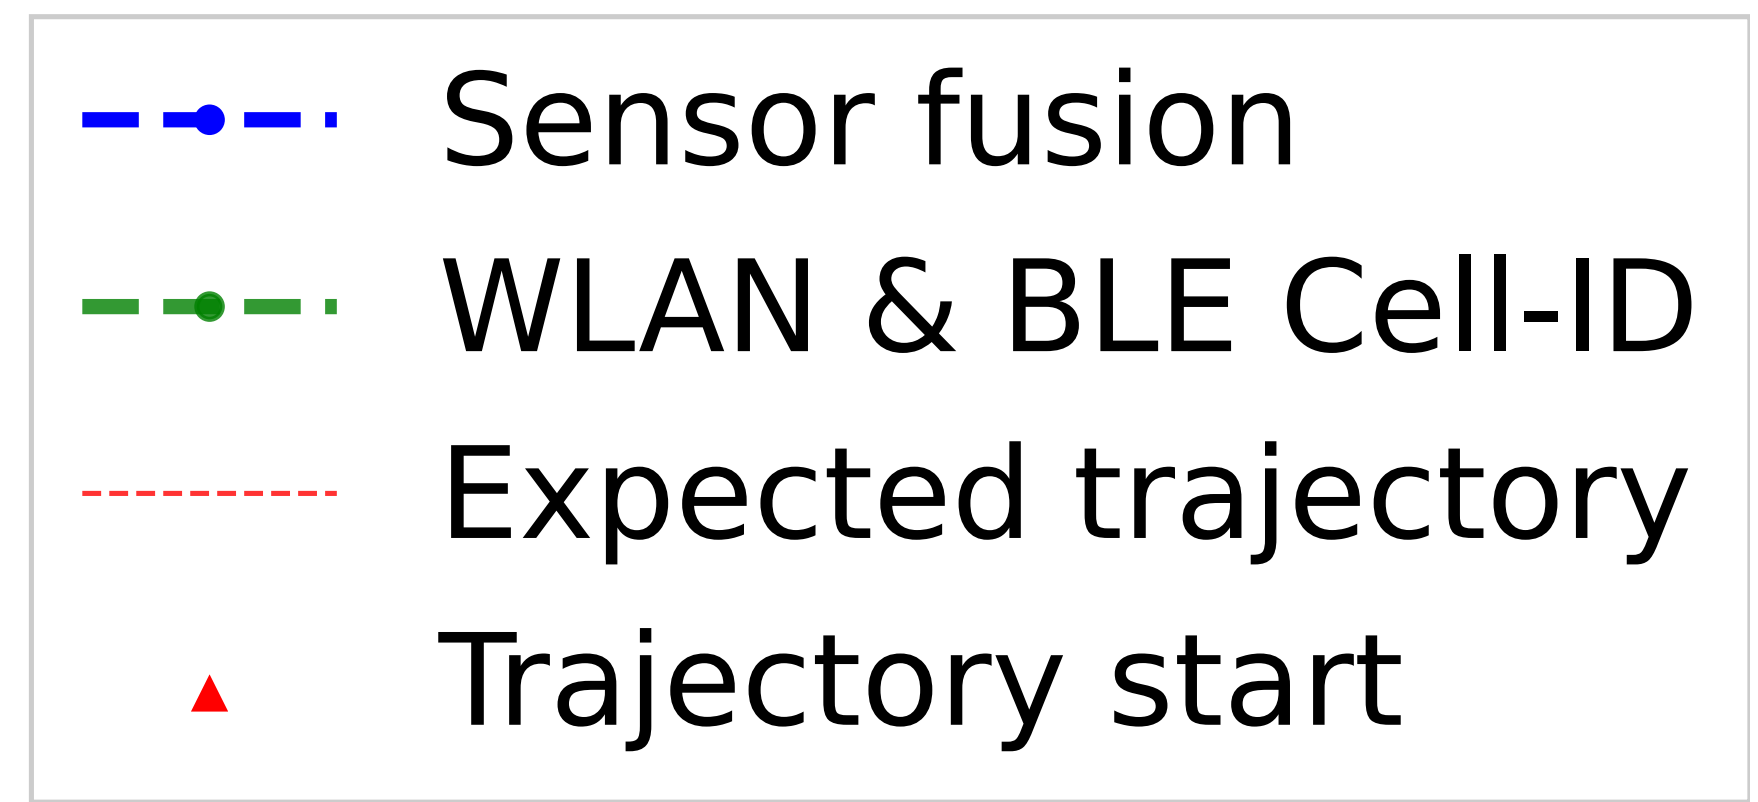

Trajectories

Validation Results ...

Trajectories

	WLAN + BLE	WLAN + BLE + IMU
<i>average error</i>	3.28 m	1.26 m
<i>maximum error</i>	9.60 m	3.10 m
<i>average update frequency</i>	3.04 s	0.52 s

Contributions and Conclusions

- ▶ OpenHPS: **open source** framework for hybrid positioning
 - Aimed towards **developers** and **researchers**
- ▶ **Abstractions** such as location-based services and spaces
- ▶ Validation of an indoor positioning use case
- ▶ Configurable and interchangeable **nodes** and **services**
- ▶ **Public dataset** with multiple orientations
